

off the trees and throw or drop them dwarf tree by any amount of pruning, keep off rain or dust. If box material into barrels for hauling to the town or and in every apple orchard ladders of is carried over from one year to aneross roads grocery where the fruit some kind soon become a necessity. other it should be carefully housed and may be exchanged for a bolt of muslin or calico, or something else needed in the house. But this is not very profitable. The progressive farmer has found that it pays to give strict attention to the of the tree is considered or the comfort -that is the apples in the middle or sorting and packing of his crop in or- of the picker. Any ladder which must bottom of the pack, whether it be a der that it may bring for him a much larger amount of money.

Just when to pick is one of the secrets of the trade which all orchardists do not appreciate. The time of picking red apples is commonly guaged by their color and that of yellow apples by the color of the seeds. The latter is the only reliable test of ripeness, for an apple picked just as the seeds have turned a light brown, and before they become dark around the edges, will be found to have not only full flavor, but the best keeping quality. But red apples are often left for some time after the seeds indicate maturity to allow them to put on more color, which they do rapidly under the influence of the bright days and frosty nights of autumn; and indeed this is the only way of obtaining color on fruit in the shady portions of the tree. Growers should bear in mind, however, that to defer picking after the seeds indicate ripeness, invites watercore and shortens the life of the fruit in storage, often to a serious extent with the midwinter varities.

TOO LATE PICKING

Much of the complaint recently lodged against the Jonathan because of rotting at the core, according to a report of the Idaho Experiment Station, is believed to be attributable to late picking. Unless this trouble is corrected the sale of this valuable variety is sure to be hurt. The purchaser is completely deceived by the perfect appearance of the fruit, not a sign of decay being visible until it is cut open, when the flesh for some distance about the core is discovered to be brown, radiating in narrow rays towards the skin, which, however, it seldom reaches. It is worse than a worm hole, for that can be cut out. A box containing even a few such specimens makes the consumer distrustful of the variety, while half or more sickens even the most enthusiastic friend of "Brother Jonathan."

Few farmers are considered capable of packing their own apples, as the statement is made that, as regards

SINGLE RAIL LADDER. A Very Light Form for the Orchard.

seeing worm holes, their eye-sight is deficient. Where there is a fruit union, the Idaho bulletin suggests that a rule should be adopted forbidding any members thereof from doing their own picking, but, they should profit by the employment of the same body of trained pickers successively at the various orchards. Even the isolated growers should endeavor to have a group of expert pickers, and employ the same ones, as far as possible, year after year. This is the way to build up a reputation that has a great cash

PACKING IN BARRELS

While the simplest method of packing apples is the old barrel of the east in which the bottom and top are faced, the apples in the middle being simply poured in, this is a slovenly, not to say deceitful method, for it requires no grading expert to sort out the best ones for facing. The Western box method, on the other hand, is more desirable, especially in cases where one wishes to cater to the fancy trade. One of the pretty points about the box package is that the exact number of apples contained therein is always known, and if stamped on the box as it should be, gives information much appreclated by the buyer. Of course this only applies where the packer adopts one particular method of placing the apples in the box.

A prominent orchardist made the statement that it costs money to step on a ladder in an orchard. This or-

Lightest of all however, the box should be marked on the tall ladders is a single rail with the end with the name of the variety pegs projecting from the sides, but it and number of apples contained, and user, and is not liable to become wide anything but firsts. ly used.

Every picker has his own opinion as to the best style of receptacle in which to place the freshly picked fruits. Buckets, baskets and bags have their devotees, and some even go so far as to provide the pickers with coal scuttles. The latter, however, too strongly suggest pouring and such rough treatment is not to be thought of with apples any more so than with eggs. Where bags are used, as is commonly the case, they should be lined with burlap though this should not cause any relaxation of care in placing fruit in them. Bags are open to the objection that the fruit in them is easily bruised where the bag brushes against a limb or ladder. The usual form of packing does not admit of removing the fruit except by pouring, and this is objectionable. The bottomless sack overcomes this difficulty as it allows the fruit to roll from the bottom when the chain is released. Such treatment might do with oranges, but with apples-never. The average picker could never withstand the temptation to let them shoot from the bag the moment the foreman's back was

THE IDEAL PICKING BAG

Perhaps the best picking bag is the apron bag. It is cheap, being easily made of a heavy grain sack, hangs in the most convenient position for filling and leaves both hands free. It

Some city schools have no space for planting at all, although some contain a good arrangement of flower beds and shade trees. In the towns and villages, also, it is possible to point out many examples showing great care and attention. It is in the country, however, that the improved school ground is rarely found.

The ideal school ground, which should really be as much a part of the building itself, and where the pupils can be shown the wonderful operations of nature, serves two distinct purposes.

First, it becomes a technical laboratory, where the intelligent teacher can point out the marvelous chemical changes which occur with each appearance of the seasons—the starting of plant life, with the warm days of spring, the fuller growth of summer with its blossoms and fruit and the matured wood growth, when the leaves drop in the fall-a cycle in the plant's history and

Second, the influence that such study has upon the growing mind. With a reasonable amount of this sort of education, coupled with the three R's, the child will never develop the tendency to rip to pieces the shrubbery of his own home or dig out and trample under foot the young plants in thegarden. Furthermore, he will likely take his school garden for his ideal, and use his influence to make the home yard its equal in appearance, if not its superior. The object, too, of school yard plant

ing is strictly utilitarian. School house, some of them splendid brick structures as well as sod house buildings, can be found which are absolutely devoid of tree or shrub planting. Both the winter winds and the summer heat operate upon them with unchecked violence. Why not plant trees and inaugurate the assistance of the pupils in so doing, which will not only act as wind breaks, but afford shade?

In connection with this subject the Bureau of Forestry of the Department of Agriculture has issued a Farmer's Bulletin (No. 134) on Tree Planting for Rural School Gardens. This can be obtained without cost, by writing either Gifford Pinchot, Forester, U. S. Department of Agriculture, Washington, D. C., or to your U. S. senator or member of Congress. It contains much information which is useful and outlines several practical plans for not only the beautification of barren schoolgrounds but for a primary study of ters. There you may not have so much forestry-tree planting and tree

USE AND INFLUENCE OF TREES.

What a tremendous influence for good in every town, it would be, if every school boy and school girl should become interested in tree planting and shrub planting. Arbor Day has become a great institution. Its observance has resulted in the planting of millions of trees every spring. Suppose that it were universal, and that every child every town should become as enthusiastic over the planting of a tree each as good fruit may be gathered from a | it, as he is over the observance of the

THE COUNTRY HOME.

Lecturer Advocates Small Independent Homes, Each on a Acre of Land

An address on "The Significance of the Country Home" was delivered by Edward H. Chandler, secretary of the Twentieth Century Club at the recent graduating exercises of the School of Domestic Science of the Boston Young Women's Christian Association. In advocating a deliberate system of training nature study by means of school gardens, he said: Most important of all is the beginning of a national movement for the making of "homecrofts" or small independent homes with perhaps an acre to enable each family to find out the true values of rural life. It would be an absurd error to suppose that such homes are now lacking. There are multitudes throughout the land. What is new is that these homes are coming at last to their own. Instead of continuing to be "e insignificant haunts of one's childhood, of which one who has risen to distinction is expected to be a little ashamed, they are being sought out as typical of the best in home life and as models to be reproduced in essentials with some adaptations to the new needs of the times.

FLOWERS AND BIRDS. To grow up Mr Chandler said with

the flowers and shrubs and trees and to learn to care for the birds, squirrels, rabbits and domestic animals is a training whose influence on character can never be over-estimated. An acre of ground is enough for Nature's purposes if he who lives on it wishes to be her pupil and helper. The country home makes possible the simplicity of living and fosters true democracy. It is both noteworthy and somewhat pathetic that hosts of city dwellers should rush to welcome and listen to the prophet of the simple life who came to us from France. Yet he had no other message than that of the country home Live among the real things of life in contact with elementary forces. Live above conventionality. Learn to be simple in your tastes and straightforward in your motives. Be a good neighbor and a true friend. This is the life which the country home fosmoney to handle, but you do not need it. Ostentatious display kills the spirit of such a home. Democracy is talked of in the city but it is felt in the country. A town meeting is the highest type of democracy yet attained. There is a common interest which binds all country dwellers together. But who are so far separated and indifferent to each others' needs as the various tenants of a city tenement or apartment

THE STRENGTH OF NATIONS.

Not all who live in the count realize its significance. Here and there is a decadent home and a degenerate family. But all over the world the strength of nations is found among those who have been fostered near to nature and have become free beings by working together in honest labor. This is a home ideal to be placed among the highest. There is little danger of its over emphasis. No matter what one's work or how heavily the burden of the city presses the determination to live on the home acre in the country may easily become almost the most powerful influence in making a successful life!"

Parking for the Town.

The town parks, or the town or village square are the lungs of its

citizens. If the town is growing, it is none too soon to start a movement to provide for the securing of ample town parking. The land is increasing; when the town has doubled and has become a small city, it will not be so easy to secure sites, readily accessible to the people, without paying an exorbitant price. Secure first the land; it is not important that a large amount of money should be at once expended its beautification, possibly it needs but little, since nature may have made it more beautiful than can man. It is not necessary that it should be transformed into carpet beds flowers and trimly kept lawns. If it affords sunlight and a green relief of grass and trees for the eye, it becomes a civilizer and an equalizer, for the poor as well as the wealthy, a resting place where a man may forget, for what God has made.

The park should be kept, in fact, as natural as is consistent with its use as to secure its site; with a view to the building up of the community, when

Improving School Grounds.

In Rochester, N. Y., the school authorities grade and sod the school yards, while the shrubbery and other planting is by private effort in conjunction with the school children. Ample land is furnished for decorative playground purposes, and most exemplary results have been obtained.

Poor Chance In the Cities.

Life in a metropolis makes young children sharp, but not clever; it often destroys their chance of ever being clever, for it hastens the development of the brain unnaturally; it makes them superficial, alert, but not observant: excitable, but without one spark of enthusiasm; they are apt to grow blase, fickle, discontented; they see more things than the country-bred child, but not such interesting things; and they do not properly see anything, for they have neither the time nor capacity to get at the root of all the bewildering objects that crowd themselves into their little lives.

JOB OFFICE WANTED.

I WANT TO LEASE—A good job or newspaper office in live town of 1500 or over. I will pay monthly rental (in advance each month), until January I, 107, when substantial payment will be made. Address A. I. Boreman—Colo, Iowa.

"The Coming People" By CHARLES F. DOLE

should be the first book to be read

There is a multitude of thinking people who see the dangers the future holds for our country unless we reach a wise solution of the tremendous social problems that

confront us.

The spirit in which we should approach the consideration of these problems is set forth in this remarkable book in a way that must be an inspiration to every truly humane and patriotic heart.

Let the spirit of common sense and optimism and fundamental economic and philosophical truth that pervades this book be taken as the underlying motive of the movement, and the Creed and Platform of the Homecrofters as the practical plan to work to, and the rest of the great social questions are certain to be rightly solved by application to them of the sound and humane principles that will guide the action of our people upon all great national ques-
